

MagicPin App – Defect Report

Tested by: Divay Garg

Bug 1: Order page defaults to New Delhi instead of the location already granted/selected on the Home page.

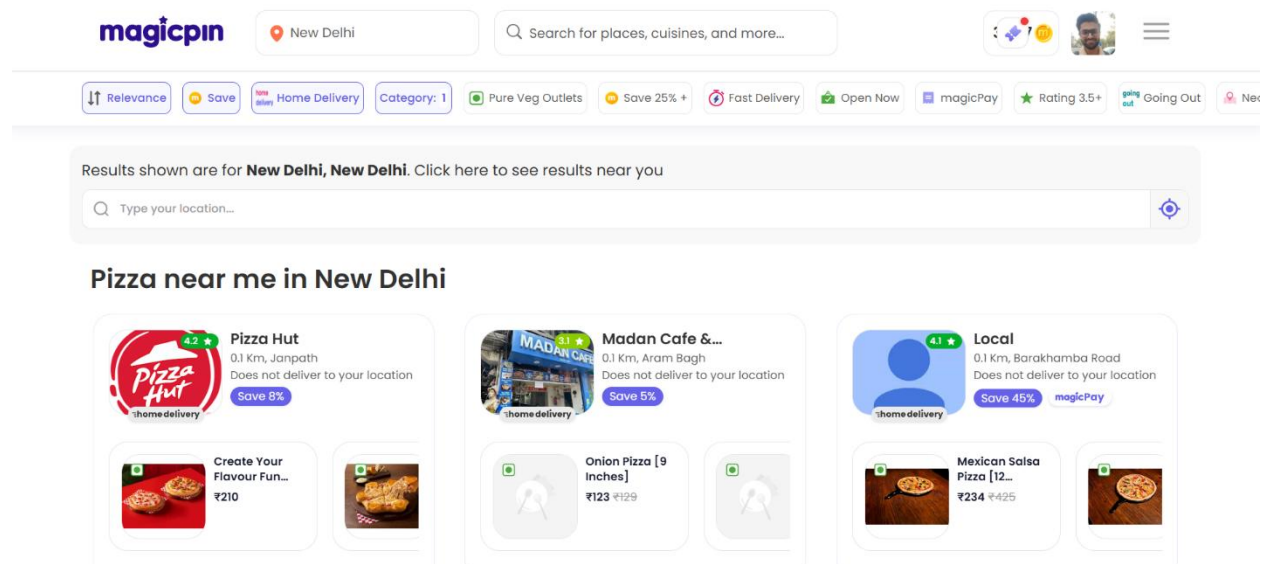

Description: The user grants location access and the correct location is reflected on the Home page. However, when navigating to the Order page, the location resets to the default "New Delhi" instead of carrying forward the previously granted/selected location.

Steps: 1. Open the app and grant location access on the Home page.
2. Confirm the Home page shows the correct detected location.
3. Navigate to the Order tab/page after adding any item from food delivery.
4. Observe the location shown on the Order page.

Expected Result: The Order page should use the same location already set/granted on the Home page, showing the user's actual city/area.

Actual Result: The Order page shows "New Delhi" by default, ignoring the location already granted on the Home page.

Screenshot:

Bug 2: Category filter under Near Me does not support proper multi-select; blocks viewing other categories until current selection is removed.

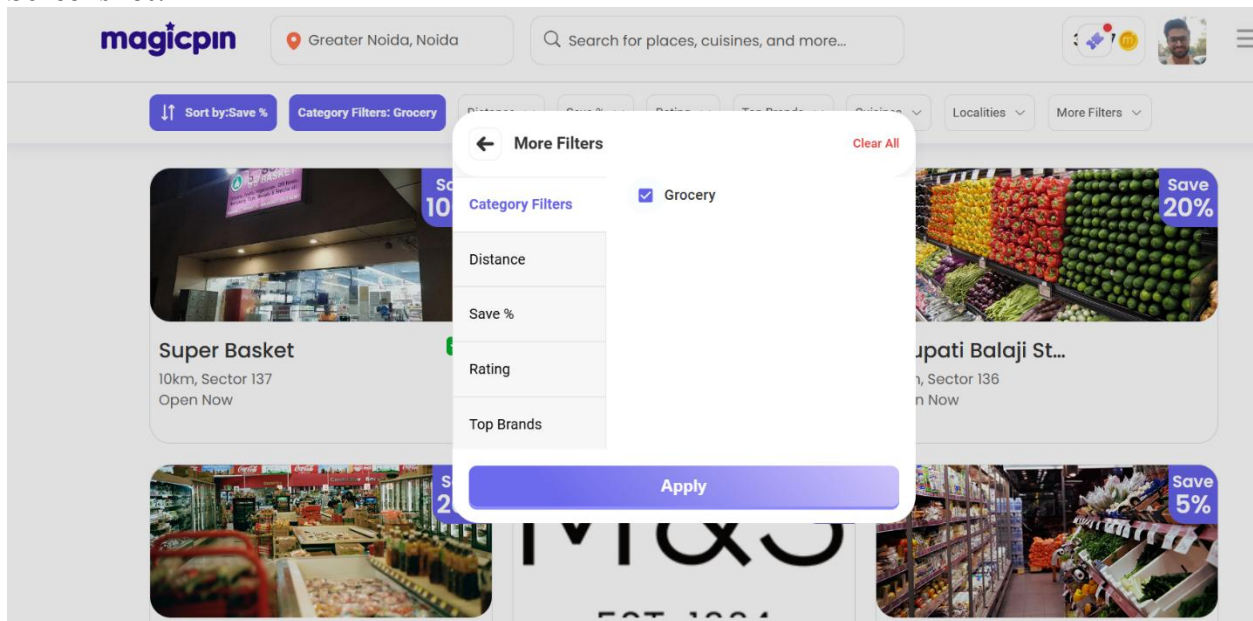

Description: On the Home page, under Near Me, scrolling to the category filter shows that only one category can be selected at a time. The user cannot mark an additional category while one is already selected, and the remaining categories are not accessible unless the currently selected one is first unmarked and the tab is reopened.

- Steps:**
1. Go to Home tab > Near Me.
 2. Scroll down to the category filter section.
 3. Select one category.
 4. Attempt to select a second category without deselecting the first.
 5. Observe the behaviour of the category list/tab.

Expected Result: The filter should allow multiple categories to be marked/unmarked freely, with all categories visible and selectable at any time (standard multi-select filter behaviour).

Actual Result: Only one category can be selected at a time. Other categories are not selectable/visible for marking until the currently selected one is unmarked and the category tab is reopened.

Screenshot:

Bug 3: "Above 70% Save" filter (with Sort by Save%) still displays items with savings below 70%.

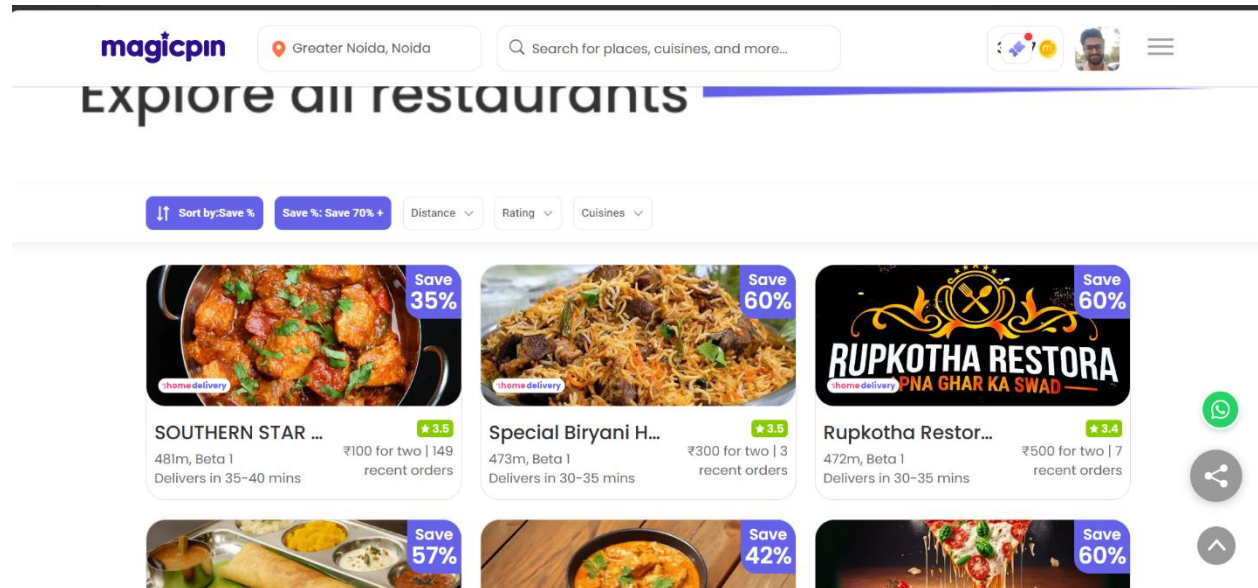

Description: On the Home tab, navigating to Order and scrolling down, applying "Sort by Save%" together with the filter for "Above 70% save" still shows items whose savings percentage is below 70%, which is inconsistent with the applied filter.

Steps: 1. Go to Home tab > Order.
2. Scroll down to the sort/filter section.
3. Apply "Sort by Save%".
4. Apply filter "Above 70% save".
5. Review the listed items and their displayed save percentages.

Expected Result: Only items with a savings percentage above 70% should be displayed when the "Above 70% save" filter is applied.

Actual Result: Items with savings below 70% are still shown in the filtered/sorted list.

Screenshot:

Bug 4: Coupon icon overlaps and hides the Magic Coins count in the top-right corner.

Description: On the Home page, the coupon icon in the top-right corner visually overlaps/hides the Magic Coins count, making the coin balance not visible to the user.

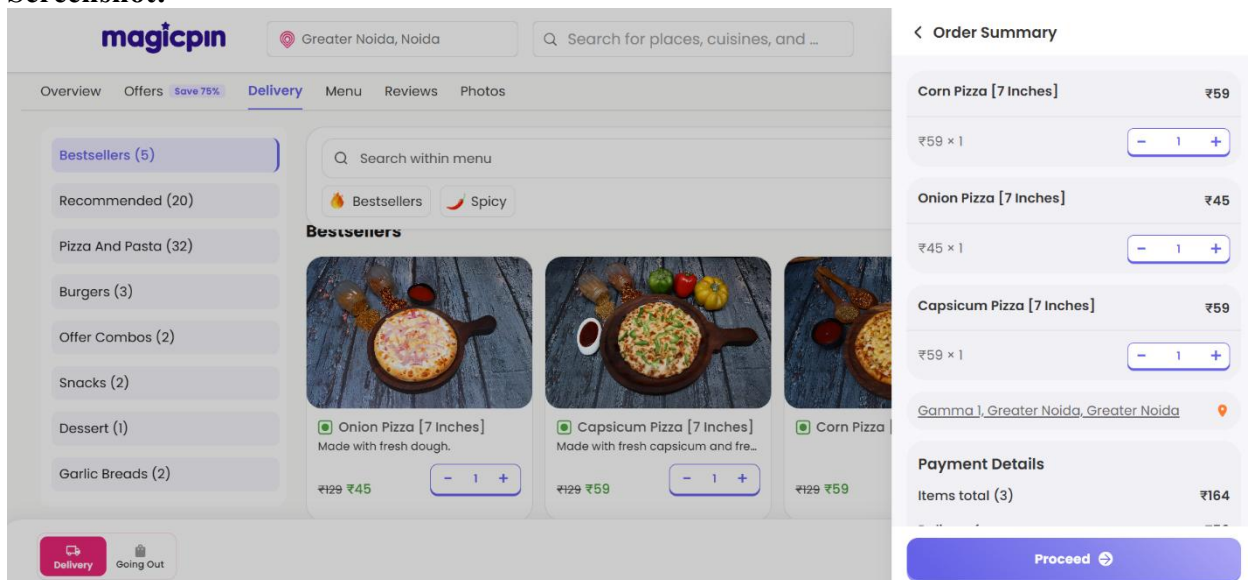

Steps to Reproduce:

1. Open the app Home page.
2. Observe the top-right corner of the screen, near the coupon icon and Magic Coins indicator.

Expected Result: Both the coupon icon and the Magic Coins count should be fully visible without any overlap.

Actual Result: The coupon icon covers/hides the Magic Coins count, so the coin balance is not visible.

Screenshot:

Bug 5: "Around You" navigation label shows "India" instead of the user's specific location.

Description: The "Around You" option in the navigation bar on the Home tab displays the generic label "India" instead of the user's specific city/locality, even though location access has been granted.

Steps to Reproduce: 1. Grant location access to the app.
2. Go to the Home tab.
3. Check the "Around You" label in the navigation bar.

Expected Result: "Around You" should display the user's specific detected city/locality (e.g., the granted GPS location), not a generic country-level label.

Actual Result: The label shows "India" regardless of the specific location granted.
