ario for forgot password In Banking Application

Scenario Description	Preconditions
When the customer clicks Forgot Password, verifies the OTP, and sets a valid new password then the password successfully resets and displays a message "Your password has been reset successfully."	Given the customer is on the login page
When the customer enters a invalid OTP and submits the form	Given the customer has requested a password reset and is on the OTP verification screen
When the customer enters a new password And the password does not meet the required policy (e.g., missing 8 characters, uppercase, lowercase, numeric, or special character)	Given the customer is creating a new password
When the customer submits the password form And both values (new and confirm password) do not match	Given the customer enters a new password And the customer enters a confirmation password
When the customer navigates to the Login page And the customer logs in using the new password	Given the customer has successfully reset the password

Expected Outcomes
Then the application should reset the password successfully And display the message: "Your password has been reset successfully."
Then the application denies verification And displays: "Invalid or expired OTP. Please request a new OTP."

Then the application prevents submission
and displays the appropriate validation message

Then the application prevents submission
And displays: "New Password and Confirm Password do not match."

Then the application authenticates the customer.
And navigates to the account dashboard.
